$\text{sp}^3\text{d}^2$  - pirâmide de base quadrada

16 - F, é angular

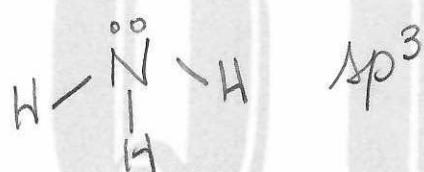

02 - V

$\text{sp}^3\text{d}$  - gongoza

04 - V

$\text{sp}^3$

Q U M I C A

08 - V

Luana Matsunaga

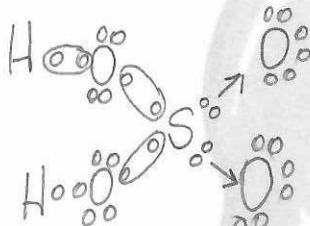

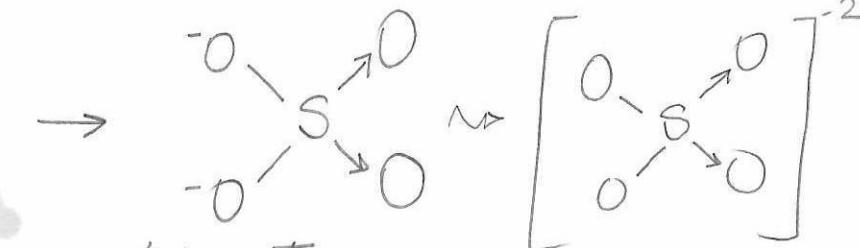

01-V

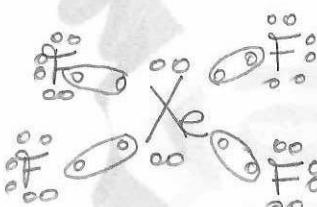

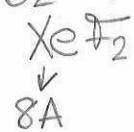

Comece pela estrutura do Ácido correspondente

Lembre-se

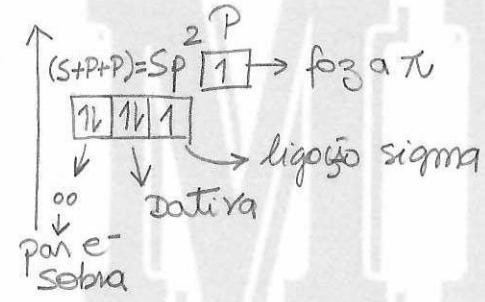

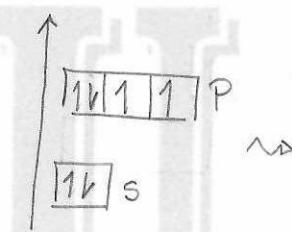

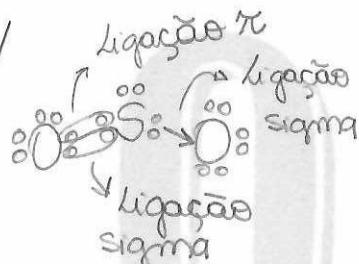

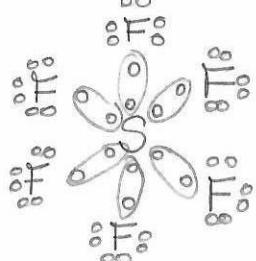

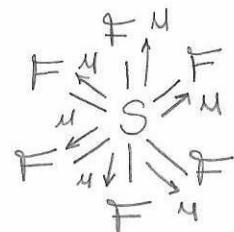

- O Átomo central vai no meio
- o nº  $H^+$  é igual a  $(-O-H)$
- e todo Oxigénio é ligado ao átomo central

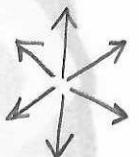

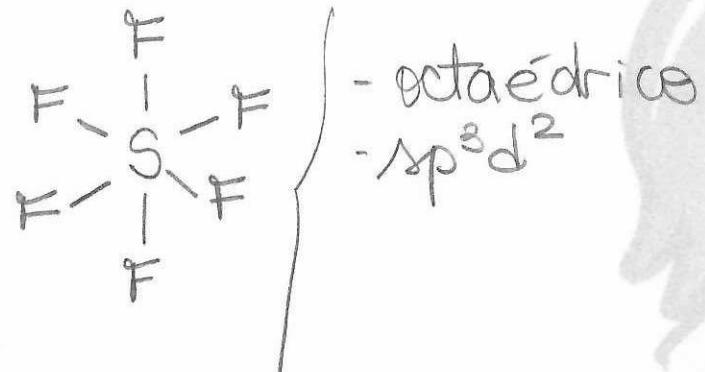

Quando ele perde  $2H^+$ 

02-V

4 ligantes, sem par e- sobrando  
no átomo centralTetraédrica  $\rightarrow$  logo  $sp^3$ 

04-V

08-F, a água é angular e  $sp^3$  $O-F$  é mais eletronegativo, então...se somar  $M_e = 0$   
molécula apolar

$$\mu = 0$$

- a) V, pois todos os vetores se anulam
- b) F
- c) F, covalentes
- d) F, a amônia é piramidal
- e) F, é pura composta já que tem 2 elementos
